Canadian Data Report of Fisheries and Aquatic Sciences

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Data Reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report.

Rapport statistique canadien des sciences halieutiques et aquatiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Les Rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au haut du résumé de chaque rapport.

ABSTRACT

Serbic, G., A. Alexander, F. Y. C. Wong, and M. Birch. 1984. Index of salmon spawning streams of British Columbia. Can. Data Rep. Fish. Aquat. Sci. 506: 115 p.

Geographical location of all salmon spawning streams of British Columbia (except transboundary streams) are shown in maps. Each stream is identified by a unique RAB number and one or more names.

RÉSUMÉ

Serbic, G., A. Alexander, F. Y. C. Wong, and M. Birch. 1985. Index of salmon spawning streams of British Columbia. Can. Data Rep. Fish. Aquat. Sci. 506: 115 p.

L'emplacement géographique de tous les cours d'eau fréquentés par les saumons reproducteurs en Colombie-Britannique (sauf les cours d'eau transfrontières) est indiqué sur des cartes. Chaque cours d'eau est identifié par un seul numéro RAB et un ou plusieurs noms.

FIGURE 6

INTRODUCTION

This report consists of maps showing the geographical locations of all salmon spawning streams of British Columbia (except transboundary streams). Streams are organized by statistical areas (subdistricts) and districts (Figs. 1 and 2). Each stream is identified by a unique RAB number and one or more names¹. Stream names in capital letters denote officially approved geographical names by the Canadian Permanent Committee on Geographical Names and can be found in the Gazetteer of Canada: British Columbia. Stream names within brackets are not officially approved geographical names. They represent alias stream names in common local use.

The Aquatics Unit of the Resource Analysis Branch, Ministry of the Environment have assigned a hierarchical coding system (RAB number) to drainage basins of British Columbia. RAB numbers classify catchment areas and river channels. This report deals with five major areas (Table 1).

A RAB number comprises of twenty-one digits in seven levels (xx-xxxx-xxx-xxx-xxx-xxx-xxx). The first level (2 digits) delineates watersheds within major catchment areas (Fig. 5). The second level (4 digits) indicates main river channels. Levels three through seven (3 digits each) indicate tributaries and the level attained depends on the position of a tributary in relation to the main stream channel which it eventually flows into. For example, Figure 6 shows Sumas River (RAB No. 00-0600) which flows into Fraser River (RAB No. 00). Chilliwack River (RAB No. 00-0600-020) flows into Sumas River and is further downstream than Lonzo Creek (RAB No. 00-0600-050) which also flows into Sumas River. Sweltzer River (RAB No. 00-0600-020-020) flows into Chilliwack River between Street Creek (RAB No. 00-0600-020-010) and Ryder Creek (RAB No. 00-0600-020-050). Hopedale Slough (RAB No. 00-0600-020-010-010) flows into Street Creek. Further information on RAB coding system can be found in "A Hierarchical Watershed Coding System for British Columbia", RAB Technical Paper #3, B.C. Ministry of the Environment, Victoria, B.C. June 1980. (Note: Because some stream channels are subdivided into sections for spawning estimates, we have decided to use the seventh level of RAB No. to identify these divisions. For example on page 24 Babine River area #1 and area #2 are given RAB Nos. 48-0000-000-000-000-000-991 and 48-0000-000-000-000-000-992 respectively).

Salmon escapements to spawning grounds are estimated each year by fishery officers of the Department of Fisheries and Oceans and are reported on B.C. 16 forms. These information (1933 to present) are incorporated in a computer data base system called Salmon Escapement Data System (S.E.D.S.). The major purpose of this report is to provide positive identification of streams for users of S.E.D.S.. More detailed information on each stream (gradient, discharge, etc.) can be obtained from a series of data reports published as "Catalogue of Salmon Streams and Spawning Escapements of Statistical Area xxx", Department of Fisheries and Oceans.

¹Note: Streams without RAB Nos. were in the process of RAB code assignment at publication time.
